

Lilly and EVA Pharma announce regulatory approval and release of locally manufactured insulin in Egypt

December 17, 2024

This milestone stems from the companies' collaboration to expand access to affordable insulin to one million people living with diabetes in low- to middle-income countries annually by 2030

INDIANAPOLIS and CAIRO, Dec. 17, 2024 /PRNewswire/ -- The Egyptian Drug Authority approved the insulin glargine injection manufactured by [EVA Pharma](#) through a collaboration with Eli Lilly and Company (NYSE: LLY). Launched in 2022, the collaboration aims to deliver a sustainable supply of high-quality, affordable human and analog insulin to at least one million people annually living with type 1 and type 2 diabetes in low- to middle-income countries (LMICs), most of which are in Africa.

This marks the first regulatory approval of EVA Pharma's insulin drug products, following Lilly and EVA Pharma's [collaboration](#) announcement in December 2022. Under this agreement, Lilly has been supplying its active pharmaceutical ingredient (API) for insulin to EVA Pharma at a significantly reduced price and providing pro-bono technology transfer to enable EVA Pharma to formulate, fill and finish insulin vials and cartridges.

Less than two years after the initial announcement, EVA Pharma has completed a new biologics manufacturing facility, finalized insulin formulations and stability testing processes, engaged with the local regulatory authorities to obtain approval of the insulin glargine injection, and released the first batch of the locally manufactured insulin drug product.

Additionally, EVA Pharma's human insulin injection was also submitted for local regulatory approval. Lilly and EVA Pharma continue working with the World Health Organization (WHO) to secure WHO pre-qualification for the locally manufactured human insulin injection. The WHO pre-qualification will further ensure that medicines manufactured by EVA Pharma meet the high-quality standards set by WHO.

"For more than a century, Lilly has been at the forefront of diabetes care, offering innovative solutions that make life better for people around the world," said Ilya Yuffa, executive vice president and president of Lilly International. "Our collaboration with EVA Pharma furthers our commitment to providing sustainable and accessible medicines worldwide. We will continue to work with global health systems and industry stakeholders to address systemic barriers to healthcare and expand equitable, affordable access to our medicines to transform more people's lives."

"Localizing essential medicines is the key to driving equitable access to healthcare," said Riad Armanious, CEO of EVA Pharma. "It takes bold collaboration, cutting-edge innovation, and tech-driven manufacturing to turn this vision into reality. Our collaboration with Lilly shows what's possible when we push boundaries together. This is just the beginning—we're on track to impact over a million lives annually across 56 countries, making a real difference for people living with diabetes."

This collaboration is part of the Lilly 30x30 initiative, which aims to improve access to quality health care for 30 million people living in resource-limited settings annually by 2030.

Most recently, Lilly and EVA Pharma expanded their collaboration, [announcing](#) that Lilly will license certain baricitinib manufacturing know-how to enable EVA Pharma to manufacture and supply treatment for various immunological diseases across 56 low- to middle-income countries in Africa.

About Lilly

Lilly is a medicine company turning science into healing to make life better for people around the world. We've been pioneering life-changing discoveries for nearly 150 years, and today our medicines help tens of millions of people across the globe. Harnessing the power of biotechnology, chemistry and genetic medicine, our scientists are urgently advancing new discoveries to solve some of the world's most significant health challenges: redefining diabetes care; treating obesity and curtailing its most devastating long-term effects; advancing the fight against Alzheimer's disease; providing solutions to some of the most debilitating immune system disorders; and transforming the most difficult-to-treat cancers into manageable diseases. With each step toward a healthier world, we're motivated by one thing: making life better for millions more people. That includes delivering innovative clinical trials that reflect the diversity of our world and working to ensure our medicines are accessible and affordable.
